

DEVELOPING TECHNOLOGIES
TO ADVANCE YOUR PRACTICE

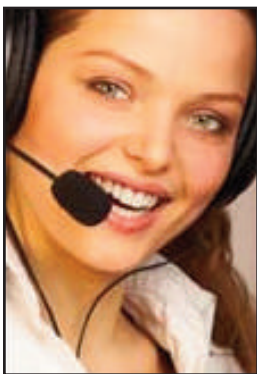

Essential Dental Systems, Inc. (EDS) was founded by Dr. Barry Lee Musikant and Dr. Allan S. Deutsch in 1982.

While first practicing Endodontists both doctors felt that there could be a better way to achieve greater clinical success for their patients while relieving the stress and anxiety associated with most dental procedures. They discussed, developed and tested several prototypes and patented their first innovative product, the split-

shank Flexi-Post. The Flexi-Post paved the way for 19 patented dental products including the Flexi-Flange split-shank post system, Ti-Core core build-up material, Flexi-Flow post cement, EZ-Fill obturation system featuring the Bi-Directional Spiral, Flexi-Overdenture, EZ-Change, Glove'n Care hand lotion, Scrub'n Glove liquid soap, and most recently the increasingly popular Endo-Express featuring the SafeSiders endo instrumentation system. These products have earned acclaim from independent non-profit dental education and product testing foundations, were rated Top 100 products by leading dental journals and received ++++1/2 ratings from Reality and The Dental Advisor.

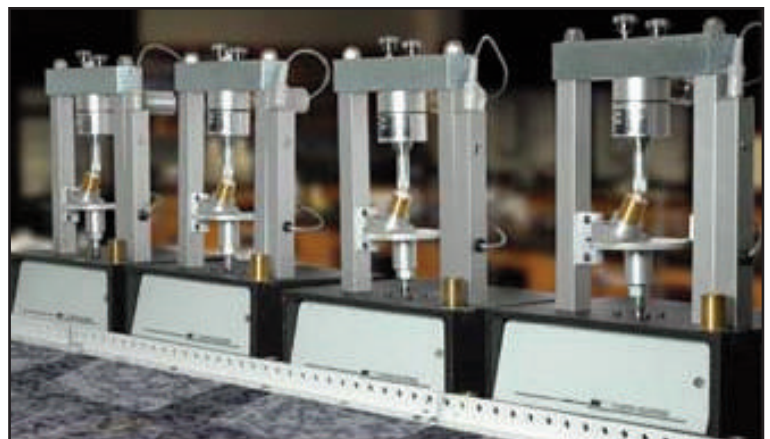

Over the years EDS has evolved into a full service manufacturer with in house Operations (including customer service, shipping and receiving), Research, Development, Quality Control, and Marketing departments along with a field sales force deployed domestically and internationally.

Our operations department is ranked amongst the best dental dealers for delivery accuracy timing and quality. Our quality control department conducts both metal and chemical testing, to assure only the highest quality products are delivered to clinicians. They perform dimensional and destructive testing, measure all critical dimensions, along with visual inspection of all metal products. The quality control staff tests physical characteristics such as mix, flow, set, hard-ness, radiopacity, and color on all chemical products.

The research and development team conduct shear bond strength, compressive strength, diametral tensile strength, post failure strength, post retention, and post head retention tests utilizing a MTS 810

Material Test System and a custom-made Com-Ten cyclic fatigue machine. Radiopacity is tested through a digital radiography sensor. EDS also has access to a ISO 1530 FESEM with an INCA Energy 400 EDX system to evaluate microscopic structure. Other tests performed include leakage studies (for endodontic sealers), anti-bacterial and cytotoxicity testing and solubility and polymerization shrinkage testing. Dr. Deutsch and Dr. Musikant have published the results of this research worldwide, co-authoring of over 250 peer-reviewed research articles.

All collateral advertising, packaging, and marketing materials, PR efforts and reporting structures are all done in house by our marketing team. Our sales force utilizes all of the above tools to reinforce our message of patented innovative quality products to the dental community.

Education is the cornerstone of Essential Dental System's business. Co-founders, Dr. Barry Lee Musikant and Dr. Allan S. Deutsch and recognized as Leaders in Education and lecture and conduct hands-on workshops teaching the revolutionary techniques associated with each of our products globally. Dr. Deutsch received his DMD at Tufts University Dental School and went on to conduct his internship at French and Ployclinic Hospital then completed his post-graduate studies at Columbia University. Dr. Musikant received his BA and then DMD at the University of Pennsylvania, completed his post-graduate Endodontic Residency at Kingsbrook Jewish Medical Cent. Dr. Musikant is a founder and fellow of the ASDA. Both Dr.'s are members of the ADA, AAE, AGD, The Dental Society of NY, First District Dental Society, Academy of Oral Medicine, Alpha Omega Dental Fraternity, and the American Society of Aesthetics. They are also fellows of the American College of Dentistry (FACD).

In 2005 EDS opened a new state-of-the-art hands-on dental education center (HODEC) in its S. Hackensack, NJ facility. This facility seats up to 40 clinicians for hands-on participation workshops utilizing the most up-to-date dental equipment.

PRODUCT INDEX

ENDODONTICS

- Ultrasonic Tips: EDS Piezo Ultrasonic Tips
 - Introductory Kit
 - Refill Kits
 - Tip Taxi
 - Tip Wrench
- Tango-Endo: 2 Instrument Endodontic System
- Endo-Express: Engine Driven Endodontic Instrumentation System
 - Introductory Kits
 - Reciprocation Handpiece
 - Air Motor
 - Mini-Latch Contra Angle
 - Steri-Tracker
 - Endo-Stops
- EZ-Fill and EZ-Fill Xpress: Root Canal Obturation System
 - Introductory and Refill configurations
- SafeSiders Deluxe Gutta Percha Point
- Endodontic Irrigation:
 - Endo-CHX- 2% Chlorhexidine Gluconate Solution With Surfactant
 - EDTA Plus- EDTA Plus With Surfactant
 - Irritrol - Two-in-One Endodontic Solution

POSTS

- Flexi-Post: Split-Shank Prefabricated Post System
 - Introductory Kits, Refill Kits, Drills, Accessories
- Flexi-Flange: Split-Shank Prefabricated Post System for use with minimal or no coronal dentin
 - Introductory Kits, Refill Kits, Drills, Accessories
- Flexi-Overdenture: Overdenture Post and Attachments
 - Introductory Kits, Refill Kits, Drills, Accessories
 - EZ-Change Attachment System
- EDS' AccessPost: Multi-Tiered, Passive Post System
 - Introductory Kits, Refill Kits, Drills, Accessories
- EDS' AccessPost Overdenture:
 - Multi-Tiered, Passive Overdenture System
 - Introductory Kits, Refill Kits, Drills, Accessories
 - EZ-Change Attachment System
- Flexi-Post Fiber: Threaded Fiber Post System
 - Introductory Kits, Refill Kits, Drills, Accessories
- Flexi-Flange Fiber: Threaded Fiber Post System for use with minimal or no coronal dentin
 - Introductory Kits, Refill Kits, Drills, Accessories
- EZ-Fit: Passive, Multi-Tiered, Fiber Post System

COMPOSITES

Flexi-Flow: Composite Cement

Flexi-Flow (Gray), Flexi-Flow Natural (Vita A3)

Flexi-Flow Auto E (Auto Mix Syringe, Vita A2)

Ti-Core: Composite Core Build-Up Material

Ti-Core (Gray), Ti-Core Natural (Vita A3), Ti-Core Fast Set

Ti-Core Auto E (Dual Cured, Auto Mix Syringe, Vita A2)

Ti-Core Flow+: Composite Core Build-Up Material and Post Cement All In One

Ti-Core Flow+ (Dual Cured, Auto Mix Syringe, Vita A2)

RESTORATIVE ADHESIVES

ENVY Self-Etch, Self-Adhesive Resin Cement

EDS One-Step, Self-Etch Bonding Agent

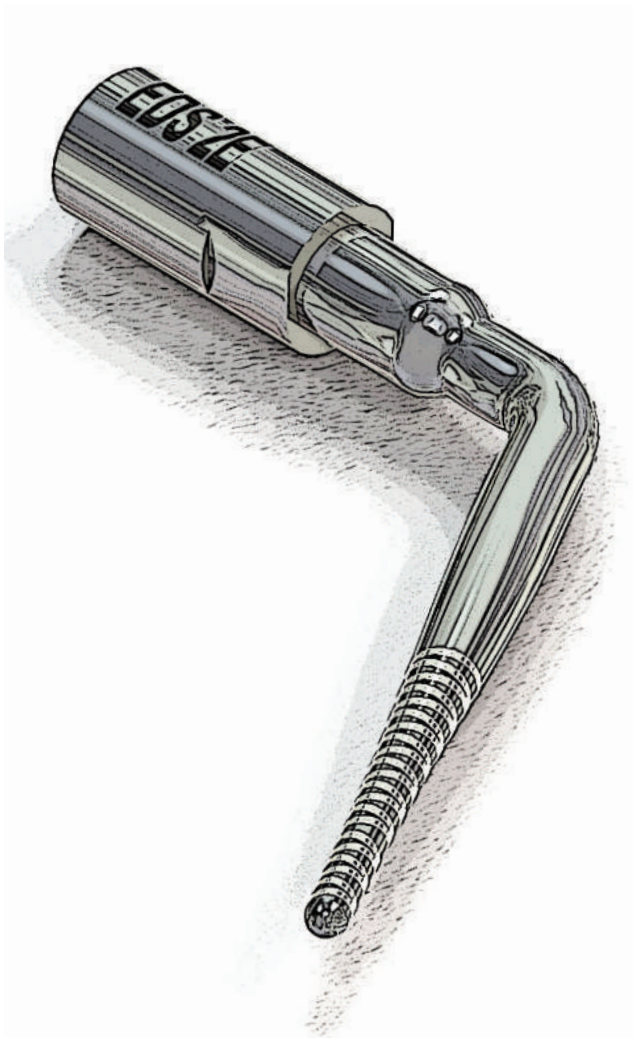

MOUTH MIRRORS

C-Mor High Definition, High Reflectance Mouth Mirrors

PERSONAL CARE

Glove'n Care: Rejuvenating Hand Cream From the Mineral Rich Dead Sea

EDS Ultrasonic Tips

Developed by leading Endodontists Dr. Allan Deutsch and Dr. Barry Musikant, EDS Ultrasonic Tips now make ultrasonic procedures more cost effective, predictable, and quicker!

Unique scientifically designed MicroHatch cutting pattern provides:

- Highest Fracture Resistance Available
- Superior Cutting Efficiency
- Less Debris Clogging
- Great Working Precision
- Remarkable Field of View is never needed.

The EDS Ultrasonic Tip Introductory Kit:

Includes: Tip Taxi, post remover (EDS 1), 4 cutting tips (EDS 2,3,4,5), passive ultrasonic tip (EDS 6), and wrench. Available in "E" (610-00) or "M" (615-00) thread configurations - see chart below. Each item is also sold separately.

M-Threads Fit

Tip

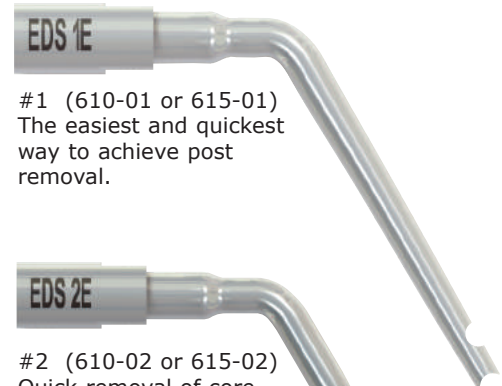

Start all ultrasonic tips in a low power setting. Increase power only as needed.

Ultrasonic Tips

EDS Ultrasonic Tips			
	CAT. NO.	Description	Size
1 - EDS 1E Ultrasonic Piezo Tip	610-01	Ultrasonic post removal tip. Non Cutting.	N/A
1-EDS 2E Ultrasonic Piezo Tip	610-02	Removes core materials and shapes of the access opening	Tip Size 1.01mm, Working Length 7.93mm
1-EDS 3E Ultrasonic Piezo Tip	610-03	Refines the access cavity and canal walls	Tip Size .92mm, Working Length 9.46mm
1-EDS 4E Ultrasonic Piezo Tip	610-04	Scouts for MB2's, opens, and troughs around canals	Tip Size .63mm, Working Length 9.97mm
1-EDS 5E Ultrasonic Piezo Tip	610-05	Scouts, opens and refines canals	Tip Size .47mm, Working Length 4.86mm
1-EDS 6E Ultrasonic Piezo Tip	610-06	Passive Ultrasonic Irrigant. Non Cutting.	Size .25mm, Working Length 8mm
1-EDS 1M Ultrasonic Piezo Tip	615-01	Ultrasonic post removal tip. Non Cutting.	N/A
1-EDS 2M Ultrasonic Piezo Tip	615-02	Removes core materials and shapes of the access opening	Size 1.01mm, Working Length 7.93mm
1-EDS 3M Ultrasonic Piezo Tip	615-03	Refines the access cavity and canal walls	Tip Size .92mm, Working Length 9.46mm
1-EDS 4M Ultrasonic Piezo Tip	615-04	Scouts for MB2's, opens, and troughs around canals	Tip Size .63mm, Working Length 9.97mm
1- EDS 5M Ultrasonic Piezo Tip	615-05	Scouts, opens and refines canals	Size .47mm, Working Length 4.86mm
1- EDS 6M Ultrasonic Piezo Tip	615-06	Passive Ultrasonic Irrigant. Non Cutting.	Tip Size .25mm, Working Length 8mm
EDS Ultrasonic Tip Accessories			
1-Tip Taxi for 6 EDS Ultrasonic Tips	690-00	Tip Taxi	N/A
1-Wrench for EDS Ultrasonic Tips	693-00	Wrench	N/A

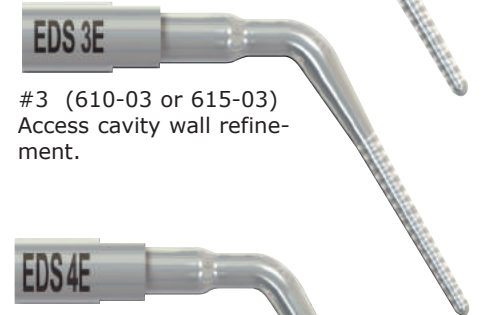

Tip Taxi and Wrench
Each available separately

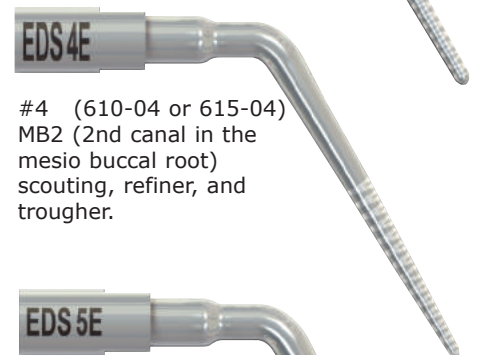

#1 (610-01 or 615-01)
The easiest and quickest way to achieve post removal.

#2 (610-02 or 615-02)
Quick removal of core material and gross shaping of access opening.

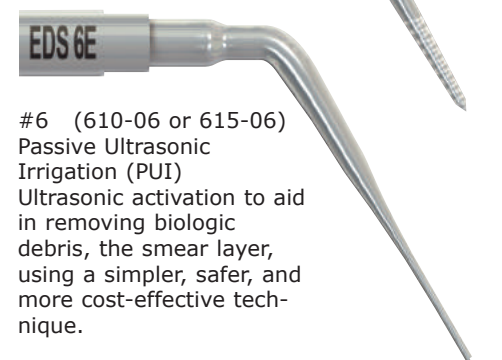

#3 (610-03 or 615-03)
Access cavity wall refinement.

#4 (610-04 or 615-04)
MB2 (2nd canal in the mesio buccal root) scouting, refiner, and trougher.

#5 (610-05 or 615-05)
Canal scouting, opener, and refiner

#6 (610-06 or 615-06)
Passive Ultrasonic Irrigation (PUI)
Ultrasonic activation to aid in removing biologic debris, the smear layer, using a simpler, safer, and more cost-effective technique.

Tango-Endo®

With Tango-Endo Instruments, it only takes two instruments to complete most cases. By eliminating the fear of fracture you can now complete your endo cases in a simple and predictable process.

Along with an efficient flute design, Tango-Endo instruments have a patented non-interrupted flat along the entire working length.

This design:

- Reduces instrument engagement allowing faster advancement with less resistance.
- Creates space for dentinal debris.
- Reduces compressive and tensile stresses during use enabling improved instrument durability.
- Increased flexibility without sacrificing strength.

The Tango-Endo reciprocation system prevents excessive binding. You can safely work lateral canal walls while preserving canal anatomy.

Tango-Endo Kits

5425-00 & 5421-00 Contain:
6 Tango-Endo Instruments (3 Shaping, 3 Finishing), 1-Tango-Endo Latch-Type Reciprocating Handpiece, 60 Precision matched gutta percha points.

60 Precision matched gutta percha points, molded (not rolled) to fit your Tango-Endo system	5400-01	—

Reciprocating Handpiece

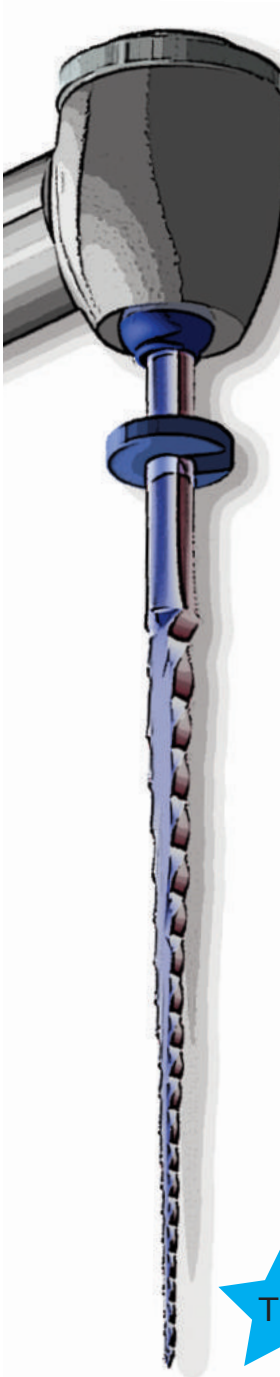

Air Motor

Endo-Express®

The Endo-Express Reciprocating Handpiece and the SafeSiders® make rotary irrelevant!

Eliminate the fear of fracture associated with crown-down systems and the typical shortcomings of the step-back process. Unlike rotary, reciprocation prevents binding, by engaging dentin only during clockwise rotation. Counterclockwise rotation disengages from the dentin. Excessive force is never needed. Replace instruments because they dull and not because you fear they will break!

SafeSiders are the only instruments with a patented non-interrupted flat along the entire working length.

This flat:

- The chisel edge of the SafeSiders allowing faster advancement with less resistance.
- Creates space for dentinal debris that would otherwise clog thread lines of conventional reamers and files.
- Reduces compressive and tensile stresses during use enabling improved instrument durability.
- Increased flexibility without sacrificing strength.
- Eliminates separation anxiety.

Tip

The SafeSiders can be used as a manual or engine driven system.

Endo-Express Kits

5610-21 & 5601-25 Contain:
E-Type, 4-Hole Air Motor, Endo-Express Handpiece, SafeSider Intro Kit (either 21mm or 25 mm Length), 4 Refills (one each .08,10,15 & 20), Steri-Tracker.

5600-21 & 5600-25 Contain:
Endo-Express Handpiece, SafeSider Intro Kit (either 21mm or 25 mm Length), 4 Refills (one each .08,10,15 & 20), Steri-Tracker.

Endo-Express Introductory Kits		
	CAT. NO.	COLOR/ SIZE

Reciprocating Handpiece

Air Motor

Mini-Latch Head Contra Angle

Endo-Express Accessories

	CAT. NO.	COLOR/ SIZE
Reciprocating Handpiece	5500-00	—
Air Motor	5510-00	E-Type / 4-Hole
Mini Latch Head Contra Angle	5520-00	E-Type
Steri-Tracker	5000-75	—

The **Endo-Express Reciprocating Handpiece** creates an engine driven balanced force technique, keeping the SafeSiders centered. The 45 degree motion virtually eliminates cyclic fatigue, torsional stress, and binding which virtually eliminates instrument separation.

E-Type, 4-hole, **Endo-Express Air Motor** enables you to use the Endo-Express reciprocation handpiece with your current 4-hole air line.

The **Mini Latch Head Contra Angle** allows 22 mm of the gates glidden length to exit the head opening versus 18 mm for a standard contra angle. Because it fits onto the same slow speed E-Type motor as your Endo-Express handpiece. It eliminates the need to have two slow speed contra angles.

The **Steri-Tracker** tracks the number of sterilizations / uses with sterilization / use counter. It accommodates 16 instruments of all length while large slotting provides visibility of SafeSiders & adequate draining during ultrasonic cleaning and sterilization.

Steri-Tracker

SafeSiders®

The Endo-Express® Reciprocating Handpiece and the SafeSiders make rotary irrelevant!

Eliminate the fear of fracture associated with crown-down systems and the typical shortcomings of the step-back process. Unlike rotary, rotation prevents binding, by engaging dentin only during clockwise rotation. Counterclockwise rotation disengages from the dentin. Excessive force is never needed. Replace instruments because they dull and not because you fear they will break!

SafeSiders are the only instruments with a patented non-interrupted flat along the entire working length.

This flat:

- The chisel edge of the SafeSider allowing faster advancement with less resistance.
- Creates space for dentinal debris that would otherwise clog thread lines of conventional reamers and files.
- Reduces compressive and tensile stresses during use enabling improved instrument durability.
- Increased flexibility without sacrificing strength.
- Eliminates separation anxiety.

Tip

By using a system that incorporates stainless steel and nickel titanium the SafeSider reamers provide no canal distortion.

Endodontics

SafeSiders Kits

5021-00 & 5025-00 Contain: Non-Circular, Non Interrupted, Flat Sided Endodontic Instruments. Stainless Steel: Two No. 08, Two No. 10, Two No. 15, Two No. 20, Two No. 25, Two No. 30, Two No. 35, Two No. 40. EZ-Fill®

EZ-Fill's patented Bi-Directional Spiral and Epoxy root canal cement combined with a single gutta percha point technique has been shown to create a seal equivalent to lateral condensation and thermoplastic gutta percha.

Thoroughly coats the walls of the root canal and lateral canals without significant cement being forced apically.

The reverse spirals on the apical end rotate in an unwinding direction out of the canal, and thus never bind.

Unlike thermoplastic techniques there is no shrinkage upon cooling.

The patented EZ-Fill bi-directional spiral whips EZ-Fill non-eugenol epoxy cement laterally preventing cement being driven past the apex allowing a complete seal when used in conjunction with gutta percha.

Tip

If you want to increase the flowability of EZ-Fill mix it with a warm metal spatula.

Endodontics

SafeSiders® Deluxe Gutta Percha Points are size specific to compliment our Endo-Express/SafeSiders Instrumentation system and work complementary with other endodontic systems. The points are made with premium materials, are expertly tapered, and hand-rolled

SafeSiders Deluxe Gutta Percha		
	CAT. NO.	COLOR/ SIZE
Gutta Percha	5000-M	Medium

Endo-CHX™- 2% Chlorhexidine Gluconate Solution With Surfactant is the only chlorhexidine product cleared by the FDA for endodontic use. Used to irrigate and cleanse the root canal removing germs that cause infection. Provides reduced surface tension to easily flow into the dentinal tubules. Light blue color for easy recognition during the irrigation procedure.

Endo-CHX		
	CAT. NO.	COLOR/ SIZE
CHX	750-16	16oz

EDTA Plus- EDTA Plus With Surfactant (17% ethylenediamine tetraacetic acid sodium salt) enhances the irrigation process. It removes the smear layer and allows penetration into the dentin tubules, includes a surfactant which reduces surface tension improving penetration into the canal, and is lightly colored to ensure easy recognition for the dentist during the irrigation procedure.

EDTA Plus		
	CAT. NO.	COLOR/ SIZE
EDTA	770-02	2oz

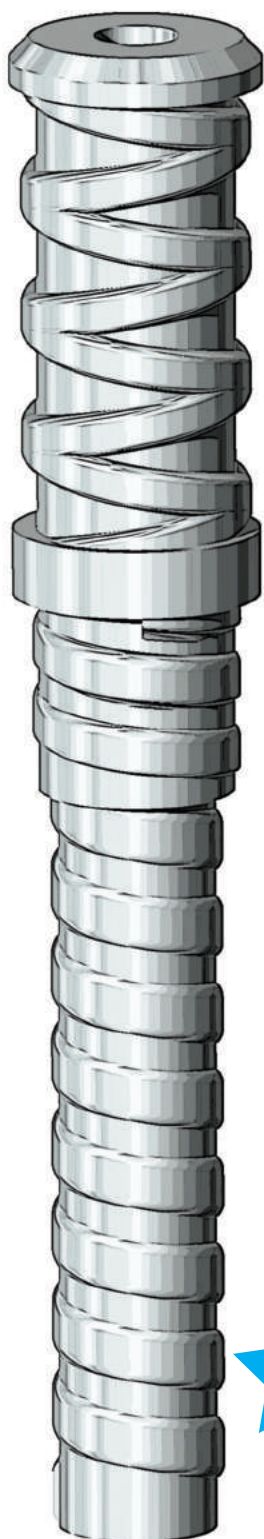

IRRITROL™- Two-in-One Endodontic solution irrigates and disinfects the root canal in one step! Irritrol had a disinfection rate of 99.99% and has better disinfects against Enterococcus faecalis better than 2% CHX alone. It removes the smear layer less aggressively than conventional irrigants, therefore causing less demineralization of the dentin. Light green color for easy recognition during the irrigation procedure.

IRRITROL		
	CAT. NO.	COLOR/ SIZE
IRRITROL	760-16	16oz

EDS' AccessPost™

EDS' AccessPost™ provides more advantages than any other passive post. The patented, thick-walled, hollow tube design and the undercuts of the head and shank offer . . . strength, retention, and stability . . . with the added insurance policy of retreatability. All at a competitive cost to the dentist.

Hollow Tube Design

Vents hydrostatic pressure of cementation, for easier post placement and a more secure cement interface while offering the ability to remove a post, should there be a failed root canal, without surgically widening the canal.

Multiple Tiers

Countersinking the post into the tooth prevents high apical stress under function common to other passive posts. The Multiple tier design adapts to anatomical flare of canal for optimum dentin-to-metal contact and maximum stability.

Tip

To create the greatest retention with this passive post system, use the EDS grooving drills. These drills create mechanical retention between the post undercuts and the dentin.

EDS AccessPost™

500-00 Contains: 16 Passive Retreatable Posts (4 Posts of 4 Sizes) 4 Primary Reamers, 4 Secondary Drills, 5 Gates Glidden Drills. 500-12 Contains: 12 Passive Retreatable Posts (4 Posts of 3 Sizes) 3 Primary Reamers, 3 Secondary Drills, 5 Gates Glidden Drills.

Contains: 10 Passive, Retreatable Posts.

Contains: 25 Passive, Retreatable Posts.

EDS' AccessPost™ Overdenture

Based on the EDS AccessPost™, this overdenture post provides more advantages than any other passive post. The patented, thick-walled, hollow tube design and the undercuts of the head and shank offer . . . strength, retention, and stability . . . with the added insurance policy of Retreatability. All at a competitive cost to the dentist.

Hollow Tube Design

Vents hydrostatic pressure of cementation, for easier post placement and a more secure cement interface while offering the ability to remove a post, should there be a failed root canal, without surgically widening the canal.

Multiple Tiers

Countersinking the post into the tooth prevents high apical stress under function common to other passive posts.

The attachment can be placed without lab assistance providing a simple, inexpensive overdenture at chairside.

This system may be used with the patented EZ-Change® keeper and cap insert system allowing, for "quick and easy" nylon cap replacement.

Tip

The standard nylon cap, and EZ-Change system fit all size EDS Overdenture systems (EDS' AccessPost Overdenture and Flexi-Overdenture).

EDS AccessPost™ Overdenture

510-00 Contains: 8 Passive Retreatable Overdenture Posts (4 Posts of 2 Sizes), 2 Primary Reamers, 2 Countersink Drills, 5 Gates Glidden Drills, 8 Nylon Attachment Caps, 8 Rubber Bands. 515-00 Contains: 8 Passive Retreatable Overdenture Posts (4 Posts of 2 Sizes), 8 Brass Transfer Studs, 2 Primary Reamers, 2 Secondary Drills, 5 Gates Glidden Drills, 8 Nylon Attachment Caps, 8 Rubber Bands

Direct Refills
Contain: 6 Passive Retreatable Overdenture Posts, 1 Primary Reamer, 1 Countersink Drill, 6 Nylon Attachment Caps, 6 Rubber Bands

Indirect Refills
Contain: 6 Passive Retreatable Overdenture Posts (4 Posts of 2 Sizes), 6 Brass Transfer Studs, 1 Primary Reamer, 1 Secondary Drill, 6 Nylon Attachment Caps, 6 Rubber Bands

Flexi-Flange®

Flexi-Flange is the patented, split-shank, parallel sided threaded post. Through the incorporation of the split shank, the stresses of insertion are absorbed by the post (not the root) during placement. Flexi-Flange predictably provides maximum retention with minimal stress. The post's stabilizing flange design makes it ideal for cases with minimal coronal dental. (For cases with coronal dental see Flexi-Post.)

Split-Shank

Closes upon insertion to deliver maximum retention with minimal insertional stress - virtually eliminating the major cause of root fracture.

Multiple Tiers

Distributes functional stresses evenly around the embedded threads. Vertical blades remove all dentinal debris, enhancing ease of placement.

Increases the intimacy of fit between the post and the natural point at which the canal widens, thereby increasing the stability of the post by preventing the breakdown of cement, greatly enhancing long term retention.

Tip

If you have no coronal dentin use this post, not the Flexi-Post. The Flange will provide the greatest possible stability.

Flexi-Flange Kits

Contains: 12 Serrated Posts With Flange (4 Posts of 3 Sizes), 3 Primary Reamers, 3 Countersink Drills, 1 Extender, 1 Wrench, 1 Depth Gauge, 5 Gates Glidden Drills

Contains: 10 Serrated Posts With Flange, 1 Primary Reamer, 1 Countersink Drill.

Contains: 30 Serrated Posts With Flange, 1 Primary Reamer, 1 Countersink Drill.

Flexi-Post®

Flexi-Post is the patented, split-shank, parallel sided threaded post. Through the incorporation of the split shank, the stresses of insertion are absorbed by the post (not the root) during placement. Flexi-Post predictably provides maximum retention with minimal stress. The proven Flexi-Post has a 99.99% success rate!* (For cases with minimal coronal dental see Flexi-Flange.)

Split-Shank

Closes upon insertion to deliver maximum retention with minimal insertional stress - virtually eliminating the major cause of root fracture.

Multiple Tiers

Distributes functional stresses evenly around the embedded threads. Vertical blades remove all dentinal debris, enhancing ease of placement.

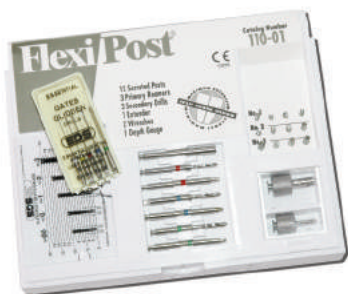

Increases the intimacy of fit between the post and the natural point at which the canal widens, thereby increasing the stability of the post by preventing the breakdown of cement, greatly enhancing long term retention.

*Data on file.

Tip

If the post needs to be shortened apically, do so only after trial insertion. Be sure to cut both legs at the same time.

Flexi-Overdenture®

Based upon a patented split shank post, the ball and socket attachment delivers all the benefits of the Flexi-Post for highest retention of full and partial dentures. Provides a simple, inexpensive overdenture at chair-side. The optional EZ-Change patented keeper & cap insert allows for "quick and easy" nylon cap replacement.

Split-Shank

Closes upon insertion to deliver maximum retention with minimal insertional stress - virtually eliminating the major cause of root fracture.

Ball and Socket Attachment

Allows rotation of the denture attachment (No need for parallelism). It provides 3 to 5 pounds of retention with an easy with in-office procedure.

Tip

Using the EZ-Change attachment system with Flexi-Overdenture and EDS' AccessPost Overdenture provides the ability to replace worn nylon cap inserts in seconds without cold curing.

Flexi-Overdenture Kits

Kits Contain: Various Flexi-Overdenture posts for use in direct/non-coping and indirect/coping techniques, Nylon Attachment Caps, Primary Reamers, Countersink or Secondary Drills, Depth Gauges, Wrench, and Gates Glidden Drills. (Please call or visit www.edsdental.com for exact kit configurations)

Flexi-Overdenture Refills Contain: 6 Overdenture posts, 6 Attachment Caps, 1 Primary Reamer. 230-xx and 236-xx also contain 1 Countersink Drill while 235-xx contain 1 Secondary Drill and 6 Brass Transfer Studs.

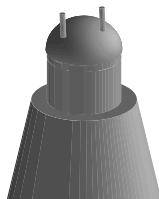

EZ-Change Metal Keeper -
Permanently cured into denture.

EZ-Change Cap Insert -
Nylon insert removes in seconds when worn.

EZ-Change Wrench -
For cap insert replacement

Flexi-Post® Fiber

Flexi-Post Fiber is the patented, parallel sided threaded post fiber post system. It's the only fiber post to provide superior retention and stability without requiring the use of a bonding agent! The new post is designed with a serrated head that permit greater retention of core material. Its unique threaded design allows greater retention than passive fiber posts without the need for a bonding agent.

Split-Shank Tap

Closes upon insertion to create the thread pattern for the post to deliver maximum retention with minimal insertional stress - virtually eliminating the major cause of root fracture.

Multiple Tiers

Distributes functional stresses evenly around the embedded threads.

Increases the intimacy of fit between the post and the natural point at which the canal widens, thereby increasing the stability of the post by preventing the breakdown of cement, greatly enhancing long term retention.

EZ-Fit® Translucent

The EZ-Fit post is the most advanced post in its class. Unlike "dowel" fiber posts, the second tier prevents "bottoming out" which eliminates the high apical stresses under function common to other passive posts. The proven second tier actually compensates for the natural anatomical flare of the canal for optimum dentin-to-fiber contact, even distribution of stresses and maximum retention. The result is a more intimate and secure dentin-to-cement interface.

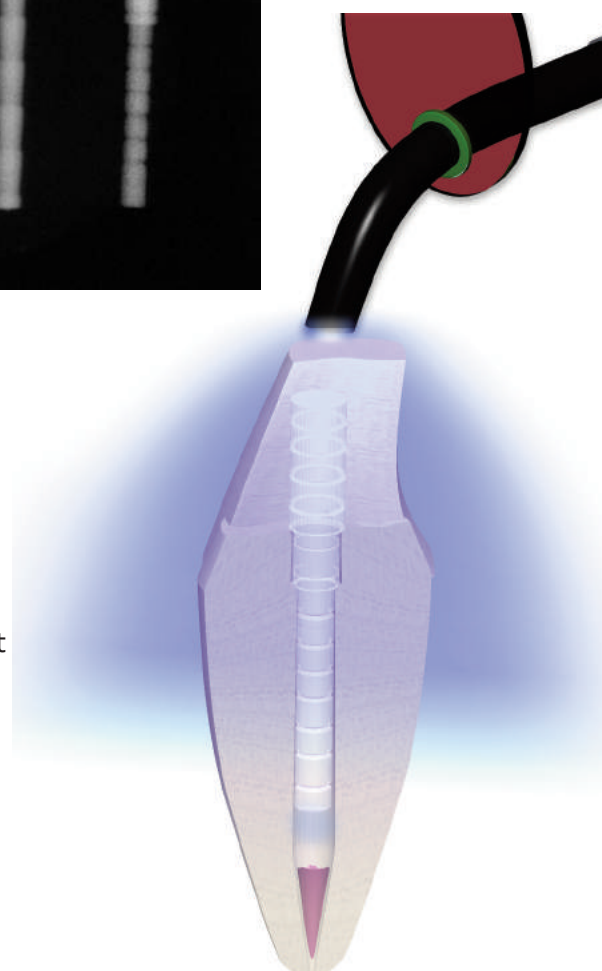

The radiopacity of the EZ-Fit Translucent Post material allows the posts to be seen clearly on a radiograph. Radiograph of EZ-Fit Translucent Post and four other fiber posts.

Multiple Tiers

Countersinking the post into the tooth prevents high apical stress under function common to other passive posts.

Adapts to anatomical flare of canal for optimum dentin-to-post contact and maximum stability.

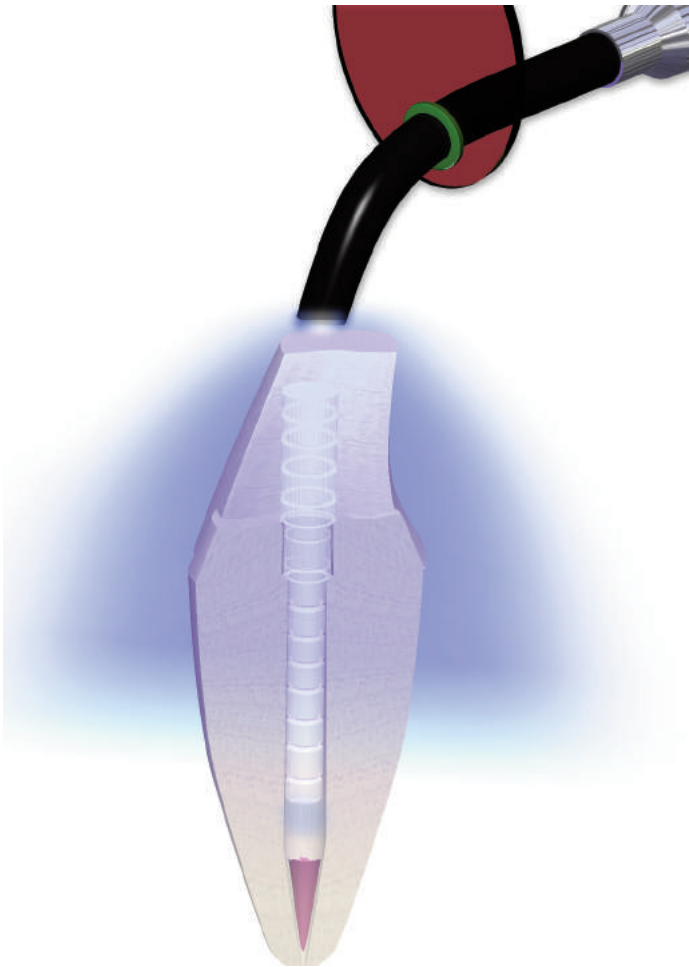

EZ-Fit Translucent Kits

Contains: 10-posts, 1-primary reamer, 1-secondary drill.

Composites

Ti-Core® / Flexi-Flow Cem® / Ti-Core® Flow+

The only patented, titanium and lanthanide reinforced composite material that surpasses the strength of dentin. Ti-Core, core build-up material and Flexi-Flow composite cement, provide a solid, long lasting restoration with documented 15+ year sustained fluoride release.

Ti-Core is available in Gray shade, Ti-Core Natural for aesthetic restorations. Ti-Core Auto E flowable dual cured composite material in Shade Vita A2.

Flexi-Flow is available in Gray shade, Flexi-Flow Natural for aesthetic restorations. Flexi-Flow Auto E (Shade Vita A2) flowable dual composite cements.

Uniting Superior Composites -
New Ti-Core Flow+ is a Reinforced Core Material AND Post Cement - ALL IN ONE!

Uniting the superior qualities of both Ti-Core and Flexi-Flow to provide you with a highly versatile product to function as both your core build-up material and luting cement.

Clear Core Forms		
Titanium	890-00	

EDS Clear Core Forms are great for light curing at all angles. They're made of polyethylene so they will not stick to core material and are easy to trim.

Contains: Box of 48 Clear Core Forms (12 Each of 4 Sizes)

Restorative Adhesives

ENVY Self-Etch, Self-Adhesive Resin Cement

ENVY is a self-etch, self-adhesive, dual cured resin cement. A new adhesion promoter technology ensures high retention on multiple surfaces. This user-friendly cement is ideal for restorations made of zirconium oxide and metal-ceramics and for the cementation of high-strength restoratives on implant abutments.

Simple, single step cementation with ensured high retention over extended time periods

Use for inlays, onlays, crowns, bridges, implant abutments and fiber post cementation

Color stability to extend the life of your esthetic restoration

Flexible use, high retention of enamel, dentin, porcelain fused to metal (PFM), zirconia, lithium disilicate, gold, etc.

Virtually no post-op sensitivity

No etching, priming or bonding - Saves you time and money

No refrigeration needed, long shelf life, moisture tolerant

Small intra oral tip allows for cement placement down the root canal!

Contains: 20 Tips with Mixers (1.00mm outer diameter) Fits All Standard Auto-Mix Double Barrel Syringes

This self-etch adhesive formulated to bond to multiple substrates for both direct and indirect bonding procedures. It's a universal adhesive that has the bond strength and durability of a total-etch adhesive while eliminating the etching step.

One step bonding eliminates the etching step and saves you valuable time and money.

One bonding agent for use in both direct and indirect bonding procedures.

The acid, primer and resin dissolve the smear layer without exposing the dentinal tubules thereby minimizing post-operative sensitivity.

Personal Care

Glove'n Care® Hand Cream

Glove'n Care, the market leading hand cream, is specifically formulated with ingredients mined from the mineral rich Dead Sea. The source of natural skin care secrets for over 2,000 years. These minerals have been combined with a special combination of oils to create a very ESSENTIAL skin care product.

Unlike petroleum-based products, Glove'n Care is water-based that will not compromise adhesive dentistry.

Hypoallergenic: Clinical support of reduced allergic risk.

Due to its non-greasy application, Glove'n Care is absorbed quickly into the skin, leaves hands feeling soft and silky smooth even after multiple washings.
